

VENKATA BHARGAV DEVARAMPATI

Backend Software Engineer • Python • Django • RESTful APIs
+91-8106482936 | bhargavdevarampati24@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFILE

Backend Software Engineer with 2+ years of experience designing scalable, production-ready web applications using Python, Django, and RESTful APIs. Proven track record of improving performance – reduced page load times by 30%, achieved 85% test coverage, and built IoT device monitoring platforms handling high-frequency telemetry data. Collaborative team player experienced in Agile workflows, code reviews, and cross-functional delivery. Passionate about clean architecture, API design, and continuous improvement.

WORK EXPERIENCE

INVENDIS TECHNOLOGIES INDIA PVT. LTD.

Bengaluru, Karnataka

Software Engineer

May 2025 – Present

- Built a real-time IoT monitoring platform in Django/DRF handling telemetry from 500+ devices with API latency under 200 ms.
- Optimised MySQL schemas and added Celery/Redis pipelines, boosting query performance by 40% and API responsiveness by ~35%.
- Implemented MQTT-based messaging and RBAC with 3+ permission tiers, improving data reliability and securing multi-user access.
- Automated generation and assignment of OpenVPN certificates for a pool of developers using Python and Bash scripts, reducing provisioning effort by 83% using Python.

INVENDIS TECHNOLOGIES INDIA PVT. LTD.

Bengaluru, Karnataka

Associate Software Engineer

Jul 2024 – May 2025

- Developed and maintained backend features in Django, owning design, implementation, testing, and deployment for core web modules.
- Designed multi-tenant MySQL schemas for 3 client environments and wrote unit tests reaching 85% coverage, reducing regressions by ~25%.
- Automated OpenVPN certificate provisioning with Python/Bash, cutting new environment setup time from 2 hours to 20 minutes.

VCUBE TECHNOLOGIES

Hyderabad, Telangana

Full-Stack Web Development Intern (Python/Django)

Jul 2023 – Feb 2024

- Worked as backend developer on a student/employee management system built with Django and React, following Agile development and testing practices.
- Built signup/login authentication, attendance record maintenance, and marks-list management modules.
- Implemented data export functionality allowing teachers to share attendance and marks details with parents in the required format.
- Contributed to project documentation and presentation materials to support team communication and delivery.

EDUCATION

PACE INSTITUTE OF TECHNOLOGY & SCIENCES

B.Tech in Computer Engineering – CGPA: 8.8/10

Ongole, Andhra Pradesh

Jun 2019 – May 2023

- Key coursework: Data Structures & Algorithms, Database Management Systems (DBMS), Object-Oriented Programming (OOP)

SKILLS

Languages: Python, JavaScript, SQL, C, HTML, CSS, C++

Frameworks & Libraries: Django, Django REST Framework (DRF), NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Databases: MySQL

Cloud & DevOps: Linux, Git

Messaging & Async: Redis, MQTT, Celery Task Queues

API & Architecture: RESTful API Design, RBAC, Pagination, Serialization, OOP

Data Analysis: Pandas, Matplotlib, Seaborn, Jupyter Notebook, Exploratory Data Analysis (EDA)

Methodologies: Agile, SDLC, Code Reviews, Unit Testing, API Documentation

Core CS: Data Structures & Algorithms, System Design Fundamentals

API Tools: Postman

PROJECTS

NETFLIX MOVIES & TV SHOWS — DATA ANALYSIS

Present

Python, Pandas, Matplotlib, Seaborn, Jupyter

- Performed end-to-end exploratory data analysis on 8,800+ Netflix titles — handling missing values, type conversions, and feature extraction using Pandas.
- Answered 5 targeted business questions using groupby, value counts, and statistical methods; uncovered that 69.6% of content is movies and India is the #2 content-producing country.
- Built 6 chart types (bar, line, histogram, scatter, pie, heatmap) with Matplotlib and Seaborn; identified a COVID-driven 2020 content production drop and seasonal release patterns.
- Produced 5 actionable business insights including content diversification strategy, regional market investment recommendations, and churn-reduction tactics.

DIABETES PREDICTION MODEL

Present

Python, NumPy, Pandas, Scikit-learn

- Built an ML classification model using Random Forest with 78% accuracy for early diabetes detection; applied SDLC and Agile methodology throughout the project lifecycle.

CERTIFICATIONS & ACHIEVEMENTS

PYTHON DATA STRUCTURES

University of Michigan, Coursera

2023 – Present

PYTHON (BASIC & INTERMEDIATE)

HackerRank

2026 – Present

SYSTEM DESIGN FUNDAMENTALS

Online certification

2023 – Present

API BEGINNER LEARNING PATH

Postman Academy

2026 – Present
